

Features

- Scoreless disk design offers higher cycle life when compared to scored reverse-acting disks
- Excels in liquid, gas, or two-phase applications
- 0% manufacturing range is standard
- Operates up to 90% of the low side of the burst tolerance of marked rating
- Withstands full vacuum without vacuum support
- Non-fragmenting design
- Excellent for isolating safety relief valves
- Encapsulating ring eliminates torque sensitivity
- Resists product build-up. The smooth convex side of the disk is exposed to the process media
- Unique holder design ensures proper disk orientation
- 3-dimensional stainless steel tag is standard
- ASME UD marking available

The process pressure is applied to the convex side of the RLP Disk placing the dome of the disk into compression. As the pressure rises past 90%, the dome becomes unstable eventually collapsing onto a shear ring that efficiently cuts the disk wide open upon reversal. The state-of-the-art shear ring allows the disk to function on both low pressure and liquid applications.

RLP Disk
Minimum and Maximum
Pressure Ratings
psig (bar) @ 72°F (22°C)

Disk Size	Disk Material		
	Minimum RLP-L with Liner	316SS	
		min.	max.
1"	18	13	40
25 mm	1.24	0.90	2.76
1-1/2"	14	9	25
40 mm	0.97	0.62	1.72
2"	8	6	25
50 mm	0.55	0.41	1.72
3"	7	4	25
80 mm	0.48	0.28	1.72
4"	5	3	20
100 mm	0.34	0.21	1.38
6"	3	2	18
150 mm	0.21	0.14	1.24
8"	3	2	18
200 mm	0.21	0.14	1.24
Max. Temp.	500°F (260°C)	900°F (482°C)	

- Standard encapsulating ring material 316SS
Other materials are available, contact ZOOK
- Larger sizes and lower burst pressures may be available on request, contact ZOOK
- For higher burst ratings refer to URA/RA Disk bulletins

RLP-I Series Disk Holder

Features

- Insert type Rupture Disk Holder – designed exclusively to be used with the RLP Series Rupture Disk
- Non-torque sensitive flat seat design
- The RLP-I Holder and Rupture Disk are assembled using safety designed side clips
- Standard materials of construction: 316SS and carbon steel. Other materials available upon request
- Permanently attached stainless steel nameplates are standard. Nameplates indicate flow direction and provide visual verification that holder assembly is properly oriented in the piping system
- Available options include: gauge tap; nipple and tee; excess flow valve; pressure gauge; J-hook; special facings and coatings

Manufacturing Range/Burst Tolerance

Specified Burst Pressure psig (bar)	Available Manufacturing Ranges	Burst Tolerance psi (bar)
1 to below 5 (0.07 to below 0.34)	0%, -5%, -10%	± 0.50 (± 0.03)
5 to below 10 (0.34 to below 0.69)	0%, -5%, -10%	± 0.80 (± 0.06)
10 to below 15 (0.69 to below 1.03)	0%, -5%, -10%	± 1.30 (± 0.09)
15 – 40 (1.03-2.76)	0%, -5%, -10%	± 2.00 (± 0.14)
Above 40 (2.76)	0%, -5%, -10%	± 5%

Notes:

- 0% manufacturing range is standard.
Disk will be marked with specified rating
- Burst tolerances are the maximum expected variation from the disk's marked burst pressure

Unique tamperproof alignment pin ensures proper disk orientation in the RLP-I holder

Holder Dimensions Inches (mm)
